DETAILED ACTION

Claims 3,4 and 9-13 are currently pending in the instant application. Applicants have added new claim 13 in an amendment filed on October 14, 2008. Claims 3,4 and 9-13 are rejected in the Office Action.

I. Response to Arguments

Applicant's arguments, filed October 14, 2008, have been fully considered but are not persuasive relating to the rejection of claims 3, 4 and 9-12 under 35 USC 103 as being unpatentable over US patent 5,980,926 in view of US Patent No. 5,208,030.

Applicants traverse the above rejection and argue that it would not have been obvious to one or ordinary skill in the art to have an active ingredient pulverized under wet milling and an active ingredient pulverized under dry milling coexist in order to enhance both the initial activity and the residual activity of an active ingredient contained in the formulation. Applicants further argue that in the comparative examples in the specification, either one of an active ingredient is pulverized under dry milling or an active ingredient is pulverized under dry milling (but not both) is used.

However, the Examiner wants to point out that according to Applicants' arguments that both dry milling an active ingredient and wet milling an active ingredient in relation to pesticides are well-known in the art. So it would be obvious to utilize both techniques (dry milling and wet milling) in the same process because both techniques separately are known to be successful in preparing these pesticidal formulations. One of ordinary skill in the art would be motivated to utilize both techniques (dry milling and wet

Art Unit: 1626

milling) in the same process for preparing a water dispersible granule formulation to enhance the activity of active ingredients in the formulation. Further, the Examiner has maintained the arguments stated by the previous Examiner in the Office Action mailed on October 14, 2008. Thus, Applicants have not overcome the 103 rejection and the rejection has been maintained.

II. Rejection(s)

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. § 103(a) that forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in Graham v. John Deere Co,, 383 U.S. 1,148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.

Application/Control Number: 10/670,867 Page 4

Art Unit: 1626

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 3, 4 and 9-12 stand rejected and new claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki et al. (USPN 5,980,926) in view of Hoy et al. (USPN 5,208,030).

Suzuki teaches a water dispersible granule formulation and method of making thereof. Specifically, Suzuki teaches a method of making said water dispersible granule by a) admixing an active agent (e.g., triflumizole), a wetting and dispersing agent (e.g., tristyryl phenyl ether, ethylene oxide, sodium polycarboxylate), and water and subjecting the mixture to wet granulation to produce "WDG-SC" with an average particle size of 1.5 microns; b) admixing a wetting and dispersing agent (e.g., sodium alkylnaphthalenesulfonate, sodium alkylbenzenesulfonate, a formaldehyde condensate of sodium liginsulfonate), mineral carriers (e.g., diatomaceous earth and potassium chloride) and subjecting the mixture to dry milling to produce "WDG-WP"; c) mixing "WDG-SC" and "WDG-WP" and then granulating and drying the mixture (Example 1). Suzuki also teaches that "any pesticide which is in solid at an ambient temperature, is hardly-soluble in water and preferably has a solubility in water as much as 2000 pm can be used as the pesticidal component usable in the present invention without any limitation, and more than 2 pesticidal components may be used in combination" (col. 2, lines 40-45). Suzuki also teaches particular pesticides including triflumizole, thiuram, fluazinam, anilazine, captan, hexythiazox, benzoximate, tebufenpyrad, ziram,

Art Unit: 1626

thiophanate-methyl and benzamideixime compounds represented by a general formula (1) (col. 2, lines 45-60).

With respect to the dry milling step, Suzuki is silent to a second active ingredient that is an agricultural chemical selected from the group consisting of an insecticide, fungicide or herbicide.

Hoy teaches a method of making a dosage device comprising dry milling at least one active ingredient to an average particle size of less than 5 microns. Hoy also teaches that any active ingredient may be used, especially a pesticide, such as an insecticide, herbicide, fungicide or the like (col. 1). Hoy further teaches the particular active agents, thiophanae methyl, captan, thiram, and hexythiazox (col. 1; claim 7) as well as incorporating wetting/dispersing agents and absorptive carriers such as the particular mineral carriers, diatomaceous earth or clay (col. 2). Because both references teach products comprising various pesticides that utilize similar ingredients and include similar methods for the same purpose, it would have been obvious to one skilled in the art at the time the invention was made to include another active agent, such as a pesticide, in order to achieve the predictable result of eliminating a wider range of pests and/or fungi. Additionally, it is desirable from an economic standpoint to have one multipurpose dosage device. Thus, in Suzuki it would have been obvious to one of ordinary skill in the art at the time the invention was made to include another active, such as a pesticide, in the dry milling step as suggested by Hoy.

Suzuki is silent to the average particle size of about 3 microns to about 30 microns of the second active agent.

Art Unit: 1626

Hoy teaches an active ingredient dosage device and a method of making said device (col. 1, lines 1-9). More specifically, Hoy teaches including "at least one active ingredient" and comminuting said active ingredient to an "average particle size of less than 5 microns" (col. 1, lines 10-12). Hoy also teaches "the comminution may be effected by dry milling the active ingredient, e.g. by means of micronization, to the desired particle size" (col. 1, lines 20-23). Also, Hoy teaches the active ingredient can be any suitable active ingredient (col. 1, line 36). It should be noted that Hoy's "less than 5 microns" reads on the claimed "about 3 to about 30 microns" because they are overlapping ranges. One of ordinary skill in the art would have been motivated to include a particle size of less than 5 microns because said size promotes "effective, accurate and even distribution" of the active ingredient (col. 6, line 33). A practitioner would have reasonably expected an active ingredient with a particle size of less than 5 microns to be evenly distributed when dispersed in water. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to include the average particle size of about 3 microns to about 30 microns as suggested by Hoy.

III. Conclusion

THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shawquia Young whose telephone number is 571-272-9043. The examiner can normally be reached on 7:00 AM-3:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph McKane can be reached on 571-272-0699. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
